

2021 Gas Performance Reporting Datasheet - Trading Indicators

IMPORTANT NOTICE FOR GAS TRADING LICENSEES

Licensees should refer to the *Gas Trading Licence Performance Reporting Handbook* for information on the definitions of gas trading indicators listed in these Datasheets. The Handbook is available on the ERA website (see link below):

<https://www.erawa.com.au/gas/gas-licensing/regulatory-guidelines>

As per section 4 of the handbook, retailers should complete the 'number' column in each worksheet as follows:

If the data is available:

Enter the data

If the activity did not occur:

Enter '0'

For example, if the retailer supplied gas to residential customers but did not place any residential customers on an instalment plan, the data for indicator R11 should be '0'.

If the activity is not applicable:

Enter 'n/a'

For example, if the retailer did not supply gas to residential customers, indicator R11 should be marked 'n/a'.

If the data is unavailable:

Leave the data cell blank. Add a comment in the 'comments' cell explaining why the data cannot be provided.

If the data shows a change of more than 10% compared to last year's data, the retailer should include the likely reason(s) for the change in the 'comments' column.

Some indicators (shaded **blue**) require a value as at 30 June.

Some indicators (shaded **green**) require a cumulative total value for the whole of the reporting year.

Some indicators require reporting to be on a per customer basis whereas others are on a per incident basis. For example, indicator R11 (Total number of residential customers who are subject to an instalment plan) should be reported on a per customer basis. This means that if a customer was placed on an instalment plan more than once during a reporting year, the customer should only be counted once. Indicator R33 (Total number of residential customer disconnections for failure to pay a bill) should be reported on a per incident basis. This means that if a customer is disconnected more than once during a reporting year, then each disconnection should be recorded separately.
