

Environmental policy

Synergy is Western Australia's leading energy generator and retailer, leading Western Australians to their intelligent energy future.

Synergy is committed to minimising the impact of its operations on the environment while supporting the current and future needs of the Western Australian community.

We recognise the following goals of our environmental management system:

1. Minimisation of waste and emissions including undertaking measures to prevent pollution.
2. Protection of the natural environment in which we operate and management of impacts to protect biodiversity.
3. Compliance with relevant environmental legal requirements and corporate commitments.

In support of these goals Synergy will:

- Maintain and improve our environmental management system and practices to meet the requirements of ISO14001.
- Integrate environmental and sustainability considerations into our business decisions and processes.
- Undertake initiatives to improve our environmental performance.
- Make available innovative and cost-effective energy solutions for our customers.
- Be a leader in the development and application of renewable and alternative energy sources.
- Encourage efficient use of resources and implement initiatives to reuse and recycle our waste.
- Provide education, tools, products and services to our customers that promote energy efficiency and lead to an environmentally sustainable future.
- Ensure our people and those working on our behalf have the necessary training and skills to fulfil their environmental responsibilities.
