

# Supported Devices List

## Emergency Solar Management – API Cloud Solution

The devices of the Technology Providers (Original Inverter Equipment Manufacturers or third-party solutions) referred to in the list below are compatible with (or supported by) the API cloud solution for emergency solar management.

Assessments are made of the technology underlying the devices of prospective Technology Providers, rather than the devices themselves. Note that these assessments are ongoing, and this list will be frequently updated. For details regarding on-site and commissioning requirements for the Supported Devices, please refer to the Commissioning Instructions or contact the respective Technology Provider directly. If your device is not on this list, and you believe it should be, we encourage you to please speak directly with your Technology Provider (where applicable).

The Clean Energy Council (CEC) approved inverter list can be found [here](#).

For the latest version of this list, as well as further information on emergency solar management and your obligations as a customer or solar installer, please visit the Synergy [website](#).
